

DAY AND NIGHT

Ba-ba-ba-ba-da-ba...

The sun comes up in the morning (in the morning).
The moon comes out at night (at night).
When the sun goes down the day turns into night.
When the stars start to twinkle I turn out the light.

The sun comes up in the morning (in the morning).
The moon comes out at night (at night).
When the sun goes down the day turns into night.
When the stars start to twinkle I turn out the light.

REFRAIN

And the moon goes round the Earth,
The Earth goes round the sun.
When I wake up in the morning a new day has begun.
A new day has begun.

Ba-ba-ba-ba-da-ba...

REFRAIN

Ba-ba-ba-ba-da-ba...

*Jupiter goes round the sun, too.
Mercury goes round the sun very quickly.
Pluto goes round the sun very slowly.
Hey, hey, Milky Way, come again another day!*
